INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

PCT/EP2004/007153

Re Item V

()

()

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: US-B-6 477 1951

The document D1 discloses an apparatus and a method of feeding DRI pellets and fines into an EAF from an inclined tube connected to a funnel and further through a downpipe inserted in the lid of the furnace.

None of the documents cited in the search report discloses a dosing orifice at the opening at the lower end of the downpipe which allows fine grained metal to be fed into the furnace in the form of an compact undisturbed bulk stream.

Hence, the sujbect matter of claims 1 to 21 is novel. In addition, none of the cited documents render obvious the use of an orfice at the end of the downpipe for the reason of improving the yield of fine grained material fed into an EAF. Accordingly, an inventive step is acknowledged.
